

Task One: Receiving/Sending Chat Messages

Mark's group is expected to do independent work on their project, but they want to keep in touch with each other. Mark informs his group of Room Raider and adds their account info to a group. Upon the creation of the Room Raider group, a chat associated with the group is automatically created, and the people in the group are able to chat amongst themselves. Because Mark created the group, he is the owner of the group and has the ability to change group settings.

Steps:

1. Log in
2. Create Group
3. Select Group
4. Chat

Revised Task Two: Booking a study room

Mark is trying to coordinate a group meeting for his group to meet to discuss some research findings. Mark opens Room Raider and chats with his group members to determine an appropriate time to meet. They decide that Wednesday evening at 5PM is available for all group members, so Mark books an empty classroom which is available at that time. Room Raider automatically sends a notification to his team members informing them of the date, time and place.

Steps:

1. Log in
2. Select Group
3. Chat
4. Find Study Room
5. Book Study Room

Task Three: URL Sharing and Chat History

Celine has been working with a group of her classmates on Friday evenings in preparation for her finals. She was planning to review old midterm examinations in preparation for the exams, which were sent to her via URL links in her group chat. She opens the URL history of the chat and finds the link which was sent by her classmates two months ago.

Steps:

1. Log in
2. Select Group
3. View URL History
4. Select Link
